

# Compas Direction

Jean Prouvé, 1953

**vitra.**

## Compas Direction

---

Jean Prouvé developed the Compas table in various models around 1950, applying the construction principles that he is known for. All share elegantly splayed, narrow legs in metal, a formal reminder of a compass – in French, “le compas”. The oiled solid wood table tops give Compas Direction an individual touch. With its compact dimensions, the table is ideal for the contemporary, largely

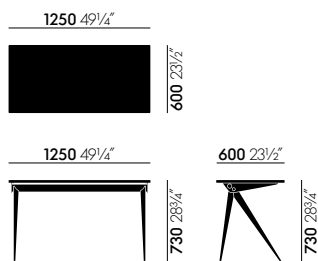

paperless, home office, where it cuts a fine figure.

### Materials

- **Table top:** solid wood, oiled; natural oak, smoked oak or American walnut.
- **Base:** moulded sheet steel, powder-coated (smooth).
