BAMBOO IS THE LARGEST MEMBER OF THE GRASS FAMILY

**THE GROWTH OF BAMBOO IS VERY FAST – THE SPECIES
THAT WE USE FOR FURNITURE GROW MORE THAN 1
METER WITHIN 24 HOURS! BAMBOO RE-PLANTS ITSELF.
NEW BAMBOO SHOOTS WILL SPREAD
FROM THE ROOTS.**

Bamboo releases more oxygen than any other plant, actually 35% more than ordinary woods. This is due to the fast growth. Bamboo also recycles large amounts of CO₂. Bamboo can absorb 30% CO₂ and release more than 35% oxygen, so choosing bamboo as material means contributing positively to CO₂ evolution.

In addition to being, a very fast-growing plant, bamboo is a very strong and hard material and stronger than traditional woods. Bamboo is very stable and is affected only very little by humidity.

BAMBOO CARE The bamboo lamellas on HOUE tables are treated with a special impregnation from the factory, which is drawn into the bamboo. To keep the table nice, it is necessary to treat the bamboo lamellas on a regularly base with oil suitable for bamboo. We recommend you to, oil the table before taking it into use, and again after approx. 4 weeks, then as needed (3 – 4 times a year).
