

Northern Lighting

Light bulb guide

Recommended light sources 2017

Choose the right bulb!

This light bulb guide includes information and advice for choosing the correct light source for lamps from Northern Lighting. It is based on functional and aesthetic properties of the bulb in accordance to the lamp design such as shape, size and light colour temperature as well as more technical aspects regarding light quality and power, life-time and accessibility. Choose the right bulb — create the right mood! For more information please contact us at post@northernlighting.no

Some words about light

Watt (W)

Watt is the measuring unit of energy consumption, but it does not tell how much light the bulb produces. A 100W regular incandescent bulb gives more or less the same amount of light as a 20W energy saving bulb, but the power consumption is different.

Lumen (lm)

Lumen is the measuring unit of the total amount of light given from the light bulb in all directions. It does not imply anything about energy consumption.

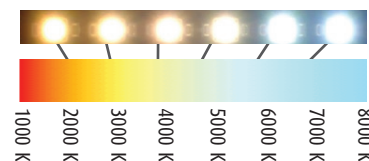

Candela (cd)

Candela is the measuring unit of the amount of light given from the light bulb in a specific direction. Only spot bulbs with reflectors or LED bulbs use this unit.

Kelvin (K)

The light colour is measured in *Kelvin*. A halogen bulb usually has a colour temperature of 2700 Kelvin (warm colour). See chart below for a graphic overview.

Socket types

We only use four different standard socket types in our lamps. This makes it easy to find the right replacement bulb.

Northern Lighting Light bulb guide 2017

	PRODUCT NAME	SOCKET	LIGHT SOURCE - TYPE	LIGHT SOURCE - NAME	PRODUCER	WATTAGE	LUMEN (lm)/ CANDELA (cd)	KELVIN	DIMMABLE	SIZE (DIAMETER x LENGTH)	ENERGY CLASS
