Installation

Will my TV fit on a Pedestal TV stand?

Pedestal TV stands are universal and will therefore, in principle, work with all regular TV brands on the market, including:

Samsung
Philips
Panasonic
LG
Nokia
Sharp
Sony
and so on.

All these brands are VESA-compatible. VESA is an international standard for the mounting holes on the back of your TV, and all Pedestal TV stands are designed to comply with this standard. So it's important to check if your TV is VESA-compatible before making a purchase.

What does VESA mean?

VESA stands for "Video Electronics Standards Association", which is an organisation that develops technical standards for products such as TVs. Briefly put, it is an international standard for the mounting holes on the reverse side of your TV.

All Pedestal stands are designed to comply with this standard, so it's important to check whether your TV is VESA-compatible before purchasing a Pedestal TV stand.

Pedestal Guides

Where will my TV be placed on a Pedestal TV stand?

The height of your screen, when mounted on the stand, depends on your screen's VESA specification. You can easily approximate the highest possible placement of your screen, using a ruler.

Firstly, determine the VESA location by measuring the distance from the bottom of the screen to the two highest placed mounting holes. Subtract this number from the height of the stand you like. Subtract an additional 2cm for stands in the Plate Series or 7,5cm for stands in Pipe or Wood Series.

You now have an approximate distance from the floor to the underside of your screen.

Can I assemble a Pedestal TV stand myself?

We are committed to developing products that are easy to assemble. At the same time, we place a lot of emphasis on the assembly instructions we supply. Click here for our assembly instructions.

How do I assemble my TV stand?

We supply detailed assembly instructions with all Pedestal TV stands, along with the bolts and tools required. If you've lost your assembly instructions – or in the unlikely event that they aren't in the box – you can always find our assembly instructions online here.

The bolts supplied do not fit my TV. What do I do?

If the screws are too long, it may help to use the large plastic spacers that are included in our mounting kit. Should the bolts be too big or too small for your TV, you will unfortunately have to purchase the correct type from the large assortment in your local hardware store. THE Pedestal mounting kit is universal and has been designed to suit 95% of all TV models.

How big can my TV be?

Our stands are intended for use with screens measuring 40-70" – or up to 75" for our Pedestal PRO stands.

If you have a screen between 40-43", it will in some situations not cover the actual frame of Pedestal TV stands in the Pipe and Wood series.

For a 65" screen, the lower mounting holes must not be more than 25 cm. from the bottom of the screen for the Moon Rollin' and Sway models to be mounted.

Screens above or below the recommended size do not align with our quality and stability requirements.

If you choose to fit a screen outside the recommended size, you do so at your own risk and responsibility.

Is there a Pedestal TV stand for a 32" TV?

Yes, it is possible to use our Linked Tall TV stand for a 32" TV. However, we cannot guarantee that in some cases there will be parts of the TV stand's mounting area that are visible, above or below the TV, depending on the location of the mounting holes on the TV in question.

Product

Is it easy to lift a Pedestal TV stand?

Pedestal TV stands weigh between 6 and 16 kg and are designed to be stable, yet simple to move around in your home. If it is likely you will need to move your TV stand regularly, we recommend buying a Pedestal TV stand on wheels.

Are Pedestal TV stands stable? I'm afraid my child could knock it over.

Pedestal TV stands are designed with the emphasis on stability. It takes a lot to knock over a Pedestal TV stand bearing a screen, and this isn't an issue we've encountered in connection with ordinary use in a home where there are young children.

Can you fit wheels to all Pedestal TV stands?

The Pedestal models Straight Rollin' and Moon Rollin' are TV stands on wheels. It is not possible to fit wheels to other Pedestal TV stands.

Can you lock the wheels on Pedestal TV stands on wheels?

No, our TV stands on wheels are not supplied as standard with lockable wheels. However, lockable wheels are available as optional extras for our Moon Rollin' and Straight Rollin' models.

Can you adjust the height of Pedestal TV stands?

No, Pedestal TV stands are fixed height stands.

How much weight can you place on a Pedestal TV stand?

We recommend placing a maximum of 50 kg on our TV stands. The Moon Pro model has been tested to 50 kg.

What's the best practice for fitting a TV to angled Pedestal TV stands?

We recommend placing the TV as high up as the TV stand itself and the VESA mounting holes allow, so as to obtain the best angle to watch from a sofa.

What's the difference between the colours Pearl and Mushroom?

Pearl is an off-white colour, while Mushroom is a warm, light-grey tone.

Why are my Remote Box Mount and Power Bar different colours?

Slight colour differences may occur in TV stands, Mounts and Power products even though these have the same colour name, for example Dusty Rose or Ultra Marine.

This is not a defect but is due to differences in materials and surface treatments.

Can you assemble the Moon PRO Pedestal TV stand without the shelf?

No, it is not possible to assemble the Moon PRO model without fitting the shelf supplied.

Accessories

Can I fit my Soundbar on a Pedestal TV stand?

In the same way as our TV stands, our Soundbar Bracket is a universal fitting. This means it suits the most common types of installation.

Check whether the mounting holes are on the rear or bottom surface of your soundbar. If they are on the bottom surface, we recommend that you purchase our Angle Brackets.

Please note that we do not include mounting screws for your soundbar, as different models use different screws. These are generally supplied together with your soundbar. If you have lost them, you can buy replacements from the manufacturer or from any well-stocked building supplies outlet.

Can I use my own soundbar fittings?

In some cases, yes – in others, no. We recommend that you give it a try, but if that doesn't provide a satisfactory result, you can buy our Soundbar Brackets instead.

Do all Mounts fit all Pedestal TV stands?

Yes – with the exception of the Linked Tall model.

Can I use Mounts for TV stands other than Pedestal?

No, our Mounts are designed specifically for Pedestal TV stands.

What do I do with my TV box?

We supply a variety of accessories for fitting different TV boxes to Pedestal TV stands. For example, fitting our Box Mount and Box Mount S solutions using the bracket and Velcro strap supplied makes it possible to mount various TV boxes to the rear of Pedestal TV stands. Depending on the size of the box, a shelf may be a good solution, too. We supply shelves for a range of Pedestal TV stands.

Which Box Mount should I choose?

That depends on the size of the box you want to fit. If you have any doubts, we recommend that you choose this one.

Can I fit my games console to a Pedestal TV stand?

Yes. You can use our Box Mount, Box Mount S and PS5 Mount models for a variety of games consoles. You can also buy an extra shelf for a number of Pedestal TV stands.

Where can I keep my Apple TV?

Our Apple TV Mount makes it simple to fit your Apple TV to the reverse side of the stand, or on a bar on the front of a Pedestal TV stand. For a different effect, you can also place your Apple TV on a shelf which you can buy as an optional extra for various Pedestal TV stands.

There's no room to fit accessories behind my Pedestal TV stand – what should I do?

Check that you have fitted your TV correctly to your Pedestal TV stand using the spacers supplied, which prevent the TV from touching the brackets. There needs to be a gap of more than 3 mm between the TV stand and the screen for you to be able to use our Mounts.

Is the Power Cable compatible with all TVs?

Our Power Cable can be used with the most common TV models. Look for the figure-8-shaped C7 Europlug socket on your TV.

Which Pedestal TV stands can you buy shelves for?

We sell shelves for the following Pedestal TV stands: Bendy Tall Straight Tall Straight Rollin' Moon Rollin' Tube Lean and Hopper.

How much weight can you put on a Pedestal TV stand shelf?

Our TV stand shelves can support a maximum of 7 kg.

Can I fit a shelf on a Pedestal Moon Rollin'?

Yes, the Pipe Shelf fits the Moon Rollin' and is mounted as such. However, you must be aware, that the TV must be placed at least 40 cm above the floor in order for it to be mounted.
