

Elliptical Table ETR

Charles & Ray Eames, 1951

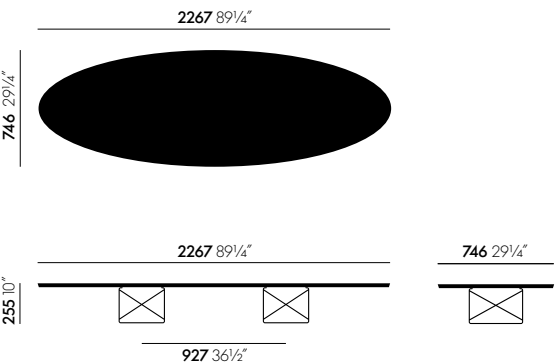

On account of its resemblance to a surfboard, the low elliptical coffee table ETR (Elliptical Table Rod Base) quickly acquired the nickname 'surfboard table'. With its twin chrome-plated base elements and laminated top in black or white, the table's construction takes up a

common theme in the work of the Eameses, namely that of bent steel wire welded together to make a rigid structure.

Materials

- **Table top:** plywood core, high-pressure laminate surface.
- **Base:** steel wire, chrome-plated or powder-coated.
- **Range of use:** recommended for residential use only.
